ABDELRAHMAN ABOBAKR

BACKEND WEB DEVELOPER

👤 SUMMARY

I am an experienced Backend Web Developer skilled in Development and implementing high-performance web applications using Django. I leverage my proficiency in Python to enhance backend processes and optimize database structures for efficient data management. My background includes building diverse projects ranging from e-commerce platforms to social media sites, etc..., displaying my commitment to innovation and excellence in web development.

📄 PROJECTS

Sociala Store

Store (Private Repo)

- This is a practice-based Django e-commerce marketplace project with full shopping functionality
- Includes product variations, multilingual support, cart, checkout, and order tracking features
- User authentication is handled via Django Allauth, and payments are integrated with Stripe
- The backend uses PostgreSQL

Sociala Media

Sociala Media(Private Repo)

- This is a Django-based social media platform built for practice and feature-rich interaction
- Secure authentication and authorization By Allauth, create posts, like, comment, and follow system
- Supports user profiles, notifications, and feed generation based on followed users
- Media uploads (e.g., profile pictures, post images) are fully integrated
- The project uses PostgreSQL

Study Bud

Study Rooms

- This is a Django-based community platform where users can create, join, and interact in topic-based discussion rooms
- Features room creation, messaging, participant tracking, and topic search

Home Space

Real estate

- My real estate website is a modern and user-friendly platform designed to help clients **buy, sell, or rent properties** with ease. The site showcases a wide range of listings including apartments, houses, and commercial spaces, complete with **high-quality images, property details, pricing, and location maps**.
